Re: Deep Data Delivery Standards 1-5 (www.DeepData.ai)

To whom this may concern,

I am writing as member of the Academic Advisory Board of the Deep Data Delivery Standard. In this role, I have analysed the example data files submitted to me confidentially by RepRisk AG on September 5th 2016 and confirm that they jointly adhere to the following standards:

1. Deep data sets are expected to be delivered with a minimum of 5 years historical data on at least 30 independent indicators per data set (e.g. credit rating, ESG data) whereby any data point that is not delivered as reported at the respective point in time should be flagged as backfilled;
2. Deep data sets are expected to be delivered with 98% value weighted market coverage, where a market (e.g. equity index) is claimed to be covered;
3. Deep data sets are expected to be delivered with an assurance that ratings will be re-considered for at least 8.25% of the companies covered in the average month of the following year;
4. Deep data sets are expected to be delivered with including considerate, accurate identifiers (eg ISINs) for 99% of the firms covered in every month of current and historical data coverage;
5. Deep data sets are expected to be delivered with in machine readable format (eg CSV, XML) and with proper documentation of the data structure¹;

Please do not hesitate to contact me in case of interest.

Yours sincerely,

Andreas Hoepner

Appointments:

- (1) Associate Professor of Finance, ICMA Centre, Henley Business School
- (2) Chair, Academic Advisory Board, Deep Data Delivery Standard
- (3) Head, Practical Tools research group, MISTRA financial systems (MFS)
